Professional Summary

Innovative Machine Learning Engineer with 3+ years of experience designing, training, and deploying generative AI systems and predictive models. Proven track record in optimizing large language model (LLM) pipelines, implementing Retrieval-Augmented Generation (RAG) structures, and creating production-ready APIs. Passionate about applying state-of-the-art NLP techniques to solve complex business challenges and drive operational efficiency.

Technical Skills

Programming Languages:

Python (Expert), SQL, C++, Bash

Machine Learning:

PyTorch, TensorFlow, Scikit-Learn, XGBoost

Generative AI & NLP:

Hugging Face, LLMs (Gemini, Llama, GPT), LangChain, Vector Databases (Pinecone, ChromaDB), RAG

Data Engineering:

Pandas, NumPy, Apache Spark, Kafka

Cloud & DevOps:

Docker, Kubernetes, AWS (S3, EC2, SageMaker), Git, CI/CD

Work Experience

Machine Learning Engineer (June 2024 - Present)

Apex Tech Solutions, San Francisco, CA

- Architected a Retrieval-Augmented Generation (RAG) system utilizing LangChain, Pinecone, and Gemini 1.5, reducing customer support response time by 45% and achieving 94% response accuracy.
- Fine-tuned open-source LLMs (Llama-3, Mistral) using LoRA/QLoRA on proprietary domain datasets, reducing hardware requirements and cutting inference latency by 30%.
- Developed and maintained modular ETL pipelines processing over 10M text records daily using Apache Spark and Pandas.
- Deployed ML models as high-throughput REST APIs using FastAPI and Docker in AWS Elastic Kubernetes Service (EKS).

Junior Data Scientist (January 2023 - May 2024)

ByteCraft Analytics, Boston, MA

- Built and evaluated predictive classification models using Scikit-Learn, XGBoost, and LightGBM to improve customer churn prediction accuracy by 15%.
- Designed and conducted A/B testing frameworks for recommendation algorithms, driving a 6.2% lift in user click-through rate.
- Created interactive data visualization dashboards using Streamlit and Plotly to communicate ML metrics to executive stakeholders.

Projects

AI-Powered PDF Semantic Analyzer (Personal Project)

Designed an end-to-end web application that parses PDFs, indexes content in a vector database, and uses text-embedding-004 and Gemini for similarity scoring and semantic analysis. Implemented the dashboard interface with Streamlit, yielding a highly responsive user experience.

Education

B.S. in Computer Science (Graduated May 2022)

University of Massachusetts, Amherst, MA
